

TextGuard Now Offers Solutions to Block Text Messages, Monitor Text Messages

Technology company helps individuals, parents, and companies avoid spam and unwanted messages with new means to block text messages, block SMS messages, filter, monitor, archive, and keep free of mobile spyware

New York, NY (PR Web) October 16, 2008 - Finally, a way to block text messages and monitor text messages on Windows Mobile and Blackberry telephones has emerged. Textguard, LLC, a technology company based in New York, has developed a new application allowing users to block incoming text messages by simply entering a designated number on their phones. Individuals using TextGuard are able to block SMS messages while concerned parents can monitor and filter the text messages of children. TextGuard also helps businesses monitor employee phones and lets company administrators lock devices down, monitor messages, archive messages, and keep harmful mobile spyware off company phones.

With recent studies predicting that the number of global text messages sent this year will reach in the trillions, the need for people and organizations to protect confidential data on mobile devices and filter unwanted text messages is an increasing concern. Todd Cohan, TextGuard's president, explained "Every day, more and more companies are using text spam to advertise their products and messages, and unfortunately, many carriers are selling their phone lists to the highest bidder." He continued, "This means that mobile telephones and devices have become a popular new target for spamming attacks and there is now a great new need to protect them."

TextGuard, LLC says it is the only company presently out there providing text blocking, text filtering, text monitoring and text archiving solutions. And, as the company continues to roll-out new developments, TextGuard says that mobile device users not just from the U.S. but from around the world will benefit from its ability to block text messages, monitor text messages, filter text messages and archive text messages. TextGuard plans to target the entire spectrum of users of wireless devices and text messaging services, from small businesses and large corporations to the mass global consumer market.

About TextGuard, LLC

TextGuard, LLC (www.textguard.com) is the sole provider of text blocking, filtering, monitoring, and archiving services that keep mobile phones and devices free of spam and spyware. Located 20 miles west of New York City, the company has offices in India which service the globe and is currently in the process of translating the TextGuard website into other languages. TextGuard, LLC was founded in 2008 by Todd Cohan, a highly successful entrepreneur with a proven track record of building successful IT security businesses. As a visionary, he is able to detect trends well before they happen, and his leadership, sales strength and fiscal acumen guarantee his business enterprises exceed expectations.
